

## **Additional Information on Community Engaged Research and Social Determinants of Health**

[Adapted from MICHr (Michigan Institution for Clinical and Health Research)]<sup>1</sup>

Applicants interested in applying for this funding are encouraged to refer to this section for definitions of key terms and background information about community engagement in research.

### **What is Community Engagement in Research?**

Community engagement in research is a process that supports authentic partnership of people affiliated with or self-identified by geographic proximity, special interest, and/or similar situations to address issues affecting the well-being of the community of focus.<sup>2</sup> Community-engaged research approaches are built on the premise that the health issues being studied are best understood by the community members living in the environments where the research is taking place, and that communities should be directly involved in the decisions that will affect their lives. This process requires power sharing, equity, and flexibility in conducting research in a manner that fits the priorities, needs, and capacities of the communities involved.<sup>2</sup>

There are different models of community-engaged research that have varying levels of community involvement. Community-Based Participatory Research (CBPR) is a specific type of community-engaged research that equitably involves community members, organizational representatives, and academic researchers in all aspects of the research process.<sup>3, 4</sup> Applicants are encouraged to utilize a CBPR approach for this funding mechanism, or a similar participatory approach that strives for equitable involvement of all partners throughout the research process.

### **Definition of Community**

For this funding opportunity, “community” is defined more broadly as a group of people affiliated by similar characteristics, such as identities (e.g. social/economic backgrounds), geographic location (e.g. city of Flint), special interests (e.g. coalition to reduce childhood obesity), and/or situations that affects the well-being of that group. Applicants must clearly describe the specific community or communities that represent the focus of the partnership.

### **What are social determinants of health?**

Healthy People 2020 provides a definition of social determinants of health: “Social determinants of health are conditions in the environments in which people are born, live, learn, work, play, worship, and age that affect a wide range of health, functioning, and quality-of-life outcomes and risks.”<sup>5</sup>

Examples of *social and physical determinants* include:

- “Availability of resources to meet daily needs (e.g., safe housing and local food markets)
- Access to educational, economic, and job opportunities
- Access to health care services
- Quality of education and job training

- Availability of community-based resources in support of community living and opportunities for recreational and leisure-time activities
- Transportation options
- Public safety
- Social support
- Social norms and attitudes (e.g., discrimination, racism, and distrust of government)
- Exposure to crime, violence, and social disorder (e.g., presence of trash and lack of cooperation in a community)
- Socioeconomic conditions (e.g., concentrated poverty and the stressful conditions that accompany it)
- Residential segregation
- Language/Literacy
- Access to mass media and emerging technologies (e.g., cell phones, the Internet, and social media)
- Culture
- Natural environment, such as green space (e.g., trees and grass) or weather (e.g., climate change)
- Built environment, such as buildings, sidewalks, bike lanes, and roads
- Worksites, schools, and recreational settings
- Housing and community design
- Exposure to toxic substances and other physical hazards
- Physical barriers, especially for people with disabilities
- Aesthetic elements (e.g., good lighting, trees, and benches)<sup>”5</sup>
